

www.*HandHelpers*.com

HandHelpers' line of ergonomic hand tools and accessories is carefully chosen and personally tested with comfort, quality and reliability in mind. The founder of HandHelpers, like many of us, suffers from injuries caused by the overuse of her hands and arms. These injuries started to limit her ability to participate in her hobbies. Not to be deterred, she sought out tools and accessories from a wide variety of sources that would allow her to continue to follow her passion for gardening and crafts.

"Digging into ergonomic gardening has unearthed so many treasures. Our choices for cream of the crop: Best ergonomic tool array: <http://www.handhelpers.com/>"

*Chalktalk for Gardeners
University of Kansas Medical Center
Kansas Senior Press Service*

HandHelpers' web site www.HandHelpers.com is a dynamic display and compilation of this ever-continuing search for the best hand tools and accessories the founder can find. Although the science of ergonomics is well defined, many tools have missed the mark. You can be assured that the tools listed on HandHelpers' web site have been personally tested and approved.

"The tools have been a great success. In fact, the park manager at the park our volunteers do most of their work at was so impressed with how these tools could help all of his employees avoid work related injuries that he did a presentation about it for the whole park district."

*Kimberly D. Miller, MS, CTRS
Project Coordinator, Partnership F.I.V.E. (Fostering Inclusive Volunteer Efforts)
University of North Carolina at Greensboro*

Although the founder suffers from repetitive stress injuries and found these tools in order to make her life's passions possible, they are not only intended for those who have injuries. Using tools from HandHelpers can go a long ways towards maintaining one's good health by not overstressing our most wonderful gift, our hands. Of course, if you have unfortunately been injured or are in pain, these tools go a long ways towards allowing you to once again enjoy those favored activities that have become difficult, if not impossible.

HandHelpers was asked to supply Dosker Manor Resident Home with ergonomic garden tools to enable their elderly residents to enjoy gardening. We just sent a shipment to Japan to a horticulture therapist who works at hospital gardens and nursing homes.

HandHelpers' mission is to help others enjoy the activities most precious to them whether they are in the garden, kitchen, crafts table or anywhere else. Our company wishes to spread the word on how to preserve the gifts we been given by using properly designed tools, implements, and accessories. We not only provide tools, HandHelpers also provides information to help others make their lives more comfortable.

McNeil Lab [Johnson & Johnson] and American Packaging asked HandHelpers to provide educational door prizes for a Safety Meeting to educate personnel about ergonomic tools available outside of the office.
